

.vimrc

```
" All system-wide defaults are set in $VIMRUNTIME/debian.vim and
sourced by
" the call to :runtime you can find below.  If you wish to change any
of those
" settings, you should do it in this file (/etc/vim/vimrc), since
debian.vim
" will be overwritten everytime an upgrade of the vim packages is
performed.
" It is recommended to make changes after sourcing debian.vim since it
alters
" the value of the 'compatible' option.

" This line should not be removed as it ensures that various options
are
" properly set to work with the Vim-related packages available in
Debian.
